Domains: SaaS • POS • B2B E-commerce • Payments • ERP/CRM • Legal Tech • AI/Automation

PROFESSIONAL SUMMARY

Business Analyst and Scrum Master with 6+ years of experience driving the full BA lifecycle - from stakeholder discovery and requirements elicitation through process modelling, wireframe-level specification, API design documentation, and UAT sign-off - within Agile Scrum delivery environments. Skilled at facilitating Scrum ceremonies, maintaining healthy backlogs, and removing delivery impediments while simultaneously owning the requirement engineering artefacts (BRD, FRD, user stories, acceptance criteria, data flow diagrams, and low-fidelity wireframe annotations) that keep engineering teams unblocked and aligned. Experienced across SaaS, POS/payments, B2B e-commerce, legal tech, and AI-driven platforms.

CORE COMPETENCIES

BA Lifecycle	Discovery, Stakeholder Interviews, Elicitation, BRD, FRD, User Stories, Acceptance Criteria, Gap Analysis, RTM, Sign-off Management
Wireframing & UX BA	Low-fidelity Wireframe Annotation, User Flow Mapping, Screen-level Acceptance Criteria, UI Logic Specification, Collaboration with UI/UX Designers
Process Modelling	BPMN, AS-IS / TO-BE Workflows, Data Flow Diagrams (DFD), Swimlane Diagrams, State Transition Models, Process Optimisation
Scrum Practice	Sprint Planning, Backlog Grooming, Daily Standup, Sprint Review, Retrospective, DoR/DoD, Velocity Tracking, Impediment Removal, Team Coaching
Agile & Delivery	Scrum, Kanban, Release Planning, Risk & Dependency Management, Change Management, Scope Control
Technical Skills	REST APIs, JSON Schema, Postman, Swagger / OpenAPI, SQL (validation), ETL Workflows, Webhook Design, System Integration Specs
UAT & Quality	UAT Strategy, Test Case Design (Happy Path, Negative, Edge), Defect Triage, Acceptance Sign-off, Regression Coverage
Stakeholder Mgmt	Workshop Facilitation, Requirements Walkthrough, Cross-functional Collaboration, Global Client Engagement, Executive Communication
AI Tools	ChatGPT, Claude AI (documentation, analysis), NotebookLM (knowledge synthesis & documentation), Julius AI (data analytics & charting), Notion AI (project docs, notes), Stitch (UI Wireframing)
Tools & Platforms	Jira, Confluence, Figma (review & annotation), Postman, Swagger, Shopify, Magento, Firebase, Stripe, Azure DevOps, Advanced Excel, Looker Studio

PROFESSIONAL EXPERIENCE

Business Analyst cum Project Coordinator | Quantic POS

Mar 2025 – Nov 2025

- Led end-to-end requirements elicitation for a SaaS POS platform - conducted stakeholder interviews and workshops (5–8 participants) using context diagrams, user journey mapping, and scenario walkthroughs; authored BRDs and FRDs signed off by the client
- Translated business needs into user stories (As a / I want / So that) with Given/When/Then acceptance criteria across merchant onboarding, subscription lifecycle, payment processing, invoice generation, and reconciliation workflows
- Produced AS-IS / TO-BE BPMN workflow diagrams for the full payment lifecycle; collaborated with UI/UX to annotate low-fidelity wireframes with field validation rules, error states, conditional logic, and screen-level acceptance criteria
- Specified REST API contracts for WorldNet payment gateway integration — endpoint definitions, request/response JSON payloads, error code catalogue, retry and timeout logic - documented in Swagger/OpenAPI; defined webhook flows for all failure modes

- Facilitated all Scrum ceremonies for a 6-person team: sprint planning, daily standups, fortnightly backlog grooming, sprint reviews, and retrospectives; enforced DoR (requirements + wireframe + ACs before sprint entry) and DoD (tested + accepted + deployed)
- Designed full UAT strategy (happy path, negative, edge, regression)
- **Reduced requirement rework by ~25% via enforced DoR | Improved first-cycle UAT pass rate to ~95% | Maintained sprint velocity within ±10% across 6 consecutive sprints**

Team Lead — Project Operations | Bamko Inc

Nov 2019 – Jul 2022 | Aug 2023 – Mar 2025

Career break Jul 2022 – Aug 2023: Personal engagement.

- Served as primary resource for multi-tenant B2B e-commerce platform delivery (Shopify, Magento, WordPress) for global enterprise brands - Citrix, Copeland, Hyland, Grubhub, MetLife - authoring BRDs and functional specs for catalogue, checkout, O2C lifecycle, fulfilment, and warehouse integrations
- Produced AS-IS / TO-BE process maps and data flow diagrams for Order-to-Cash workflows across 4 geographies; defined integration specs for DHL, UPS, and FedEx shipping APIs - documenting message structures, transformation rules, and reconciliation checkpoints
- Reviewed and annotated UX wireframes for the Citrix B2B estore global rebranding - flagging gaps between design intent and backend capability; documented screen-level acceptance criteria used by QA and engineering teams
- Coordinated Agile delivery for distributed engineering teams: facilitated sprint planning, backlog prioritisation, cross-timezone standups, and scope change control via formal change log; tracked dependencies and escalated blockers with mitigation options
- Led 2-year global rollout of Citrix B2B estore including order management, warehouse integrations, real-time inventory sync, and SLA-based international fulfilment
- Contributed to **RAG-based AI** assistant validation - test scenarios, edge cases, and feedback loops

Pre-Sales Analyst (AI-Powered ITSM Product) | Rezolve.AI

Jul 2018 – Jun 2019

Rezolve.AI was an early-stage AI product company offering a conversational AI agent deployed inside Microsoft Teams and Slack to automate L1 IT and HR support ticket deflection for enterprise clients using NLP-based intent recognition.

- Managed full pre-sales cycle - conducted product discovery calls, delivered customised live demos and webinars to enterprise prospects, and authored RFP/RFI responses mapping client requirements to platform capabilities with functional comparison matrices
- Elicited and documented client ITSM automation requirements: intent categories, escalation rules, ticket routing logic, SLA thresholds, and integration touchpoints with ServiceNow, Freshservice, and Jira Service Desk
- Produced functional specifications including conversation flow diagrams (intent → entity → action → response), chatbot decision trees, AS-IS/TO-BE support workflow maps, and API integration docs for HR and IT data sources
- Actively participated in Scrum ceremonies — contributed to sprint planning, backlog grooming, and user story writing (Given/When/Then ACs); tracked sprint progress in Jira and maintained release notes per sprint cycle
- Coordinated UAT for enterprise deployments (bot flows, intent accuracy, escalation triggers, ticket creation); authored release notes post-deployment; provided 30-day post-launch hypercare including intent retraining coordination and SLA monitoring

BA LIFECYCLE COVERAGE

End-to-end delivery capability — phases owned or directly contributed to across all engagements:

Sprint Planning	Facilitate capacity planning, sprint goal definition, story pointing (Planning Poker), and sprint commitment. Hard-enforce DoR - no story enters without requirements, wireframe reference, and acceptance criteria.
Daily Standup	Timebox strictly to 15 minutes. Focus on blockers, not status reports.
Backlog Grooming	Bi-weekly refinement: decompose epics into sprint-ready stories, apply MoSCoW prioritisation, validate acceptance criteria, attach wireframe and process flow references, estimate collaboratively.
Discovery & Scoping	Stakeholder interviews, workshops, context diagrams, problem statement, scope baseline BRD
Requirements Elicitation	User journey mapping, scenario walkthroughs, BRD/FRD authoring, gap analysis, RTM
Process Modelling	AS-IS/TO-BE, BPMN, DFD, state transition models, swimlane diagrams, workflow optimisation

Wireframe Collaboration	Low-fi wireframe annotation, UI logic spec, screen-level ACs, error states, UX gap flagging
API & System Spec	REST contracts, JSON schema, Swagger/OpenAPI, webhook design, integration data mapping
Sprint Planning & Grooming	DoR enforcement, story decomposition, MoSCoW prioritisation, Planning Poker, capacity planning
Sprint Execution & Standups	Impediment removal, clarification log, scope change control, mid-sprint BA desk checks
Sprint Review & Retro	Demo coordination, feedback capture → backlog, Start/Stop/Continue retro, action tracking
UAT & Sign-off	Happy path + negative + edge test cases, defect triage P1–P3, acceptance gate, Go/No-Go
Release & Post Go-Live	Release notes, deployment runbook, production monitoring, lessons learned

SCRUM PRACTICE HIGHLIGHTS

Ceremonies and artifacts I own, facilitate, and continuously improve as Scrum Master:

Sprint Planning	Facilitate capacity planning, sprint goal definition, story pointing (Planning Poker), and sprint commitment. Hard-enforce DoR — no story enters without requirements, wireframe reference, and acceptance criteria.
Daily Standup	Timebox strictly to 15 minutes. Focus on blockers, not status reports. Maintain a live impediment log and resolve or escalate within 24 hours.
Backlog Grooming	Bi-weekly refinement: decompose epics into sprint-ready stories, apply MoSCoW prioritisation, validate acceptance criteria, attach wireframe and process flow references, estimate collaboratively.
Sprint Review & Demo	Coordinate demo readiness with engineering. Facilitate structured client walkthrough. Capture feedback into Jira as new stories or acceptance criteria amendments — nothing is lost in conversation.
Retrospective	Run Start/Stop/Continue or 4Ls formats. Every action item gets an owner and a due date. Open retro actions are never carried more than 2 sprints — accountability is non-negotiable.
Metrics & Reporting	Track velocity, burndown, cycle time, and defect escape rate per sprint. Weekly stakeholder status updates with trend commentary — not just numbers, but what the trend means for delivery.
BA–Scrum Integration	Unique strength: I serve both roles simultaneously. Requirements, wireframes, and ACs are ready before sprint planning starts. The BA output feeds the Scrum input — eliminating the handover gap that kills sprint predictability.

CERTIFICATIONS & TRAINING

- Agile with Atlassian Jira - Coursera (Scrum ceremonies, sprint management, Jira board configuration)
- Google Project Management: Foundations - Coursera
- Prompt Engineering for Project Managers - PMI
- Introduction to Azure DevOps Boards - Coursera
- Build Your First RAG System in Python - Scaler
- Hands-on AI Tools: Design to Development - Be10X
- Advanced Excel | Google Looker Studio Dashboards | Data Science & Analytics - BIT Class (2021)

EDUCATION

Executive MBA – Leadership & Organizational Behavior (HRM)	Doon University	2020 – 2022
B.Tech – Electrical & Electronics Engineering	College of Engineering Roorkee	2017
Intermediate (Class XII)	Army Public School, Dehradun	2010
